(a) what drives the gap
chain rule
size
function types
powers and constants
quotient rule
tricky exponents
product rule
linear BT
boosted BT
0
1
2
mean $|\phi|$ over random pairs (logits)
(b) one comparison
quotient rule
tricky exponents
function types
size
chain rule
powers and constants
product rule
0
1
2
cumulative $\hat{\delta}(A) - \hat{\delta}(B)$ (logits)
(c) sampling
6×10^{-2}
4×10^{-2}
3×10^{-2}
2×10^{-2}
10^{-2}
RMS error vs. exact
sampling
$\propto n^{-1/2}$
10^{1}
10^{2}
random orders n
